Kwangsoo Shin

Software Developer

 ksshin@kakao.com

 kwangsooshin

 kwangsooshin

Introduce

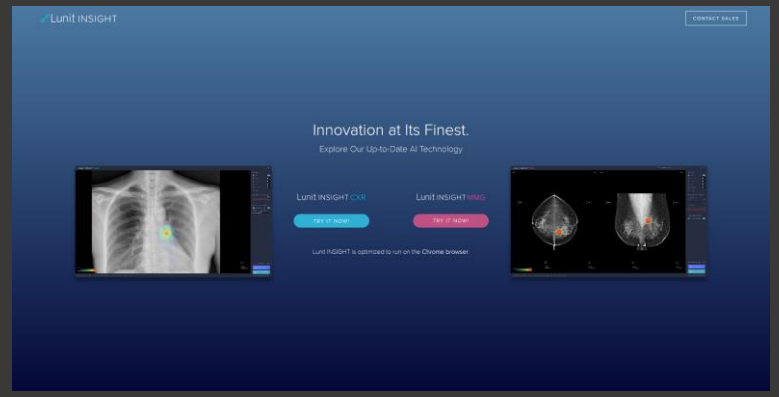
Careers

Lunit Inc.

Software Developer, Aug. 2019 - Present

- Developed Backend services of Lunit INSIGHT
- RESTful API server for chest and breast X-ray analysis from deep learning models
- Designed new feature for visualization of machine model result

Lunit



Introduce

Education & Skills

Master's Degree

Sogang University
Computer Science and Engineering
Multimedia System Lab.
Advisor Professor Jongho Nang

Bachelor's Degree

Sogang University
Computer Science and Engineering & Mass Communication & Media Engineering

Skills

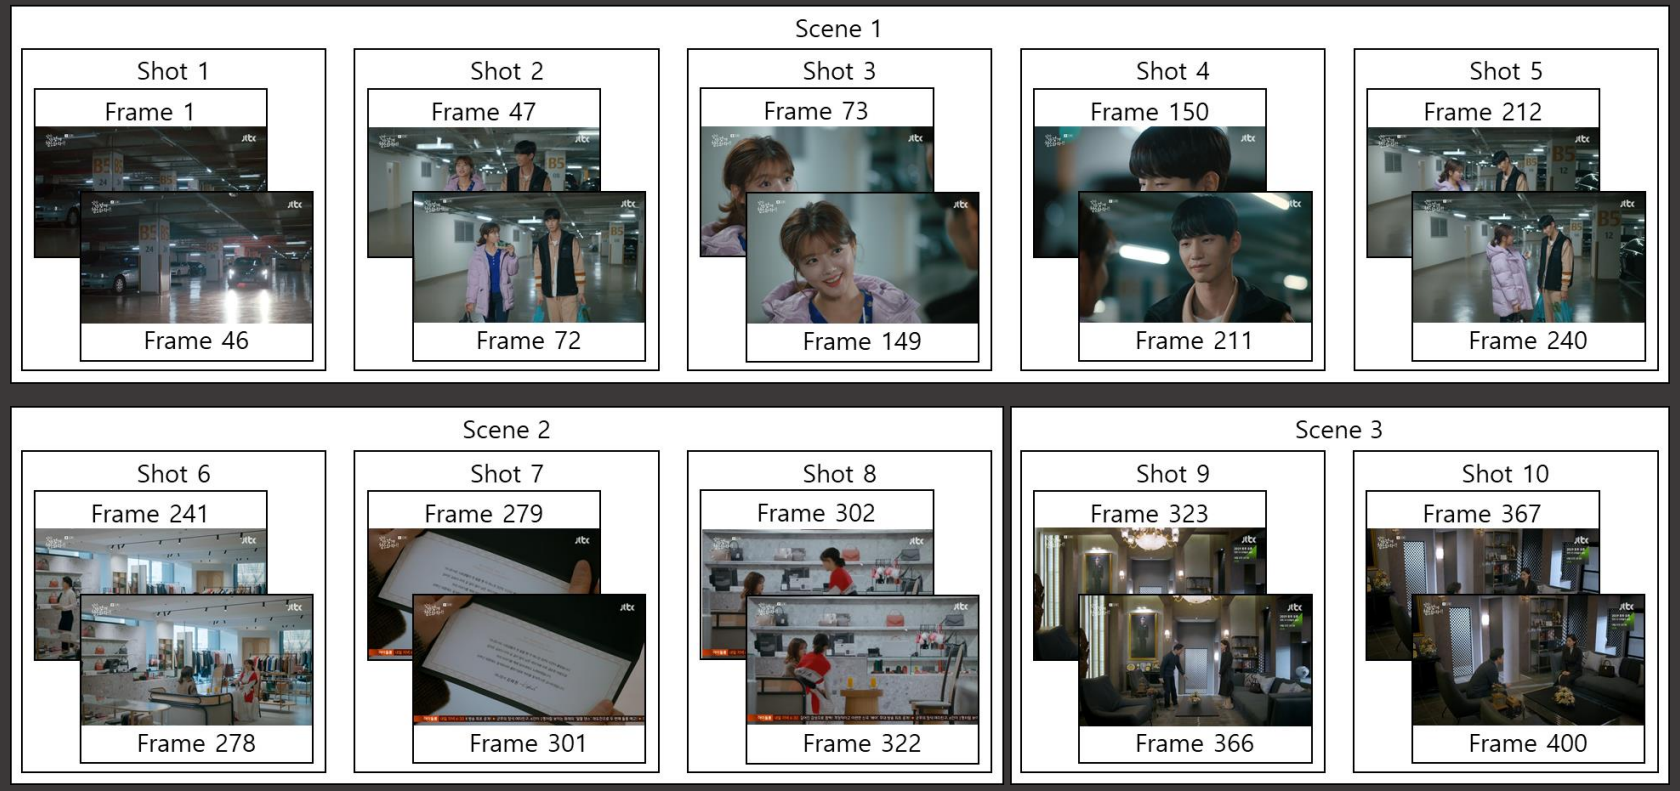
Programming Languages	C/C++, Python
Platforms & Frameworks	PyTorch, Django
And also	Docker/Docker Compose

Thesis

A CNN-based Place Classifier with Attention Method for Scene-level Place Recognition in Broadcasting Video

Background

- The video contains many scenes, which in turn consist of many shots
- Each shot may or may not have information about the place

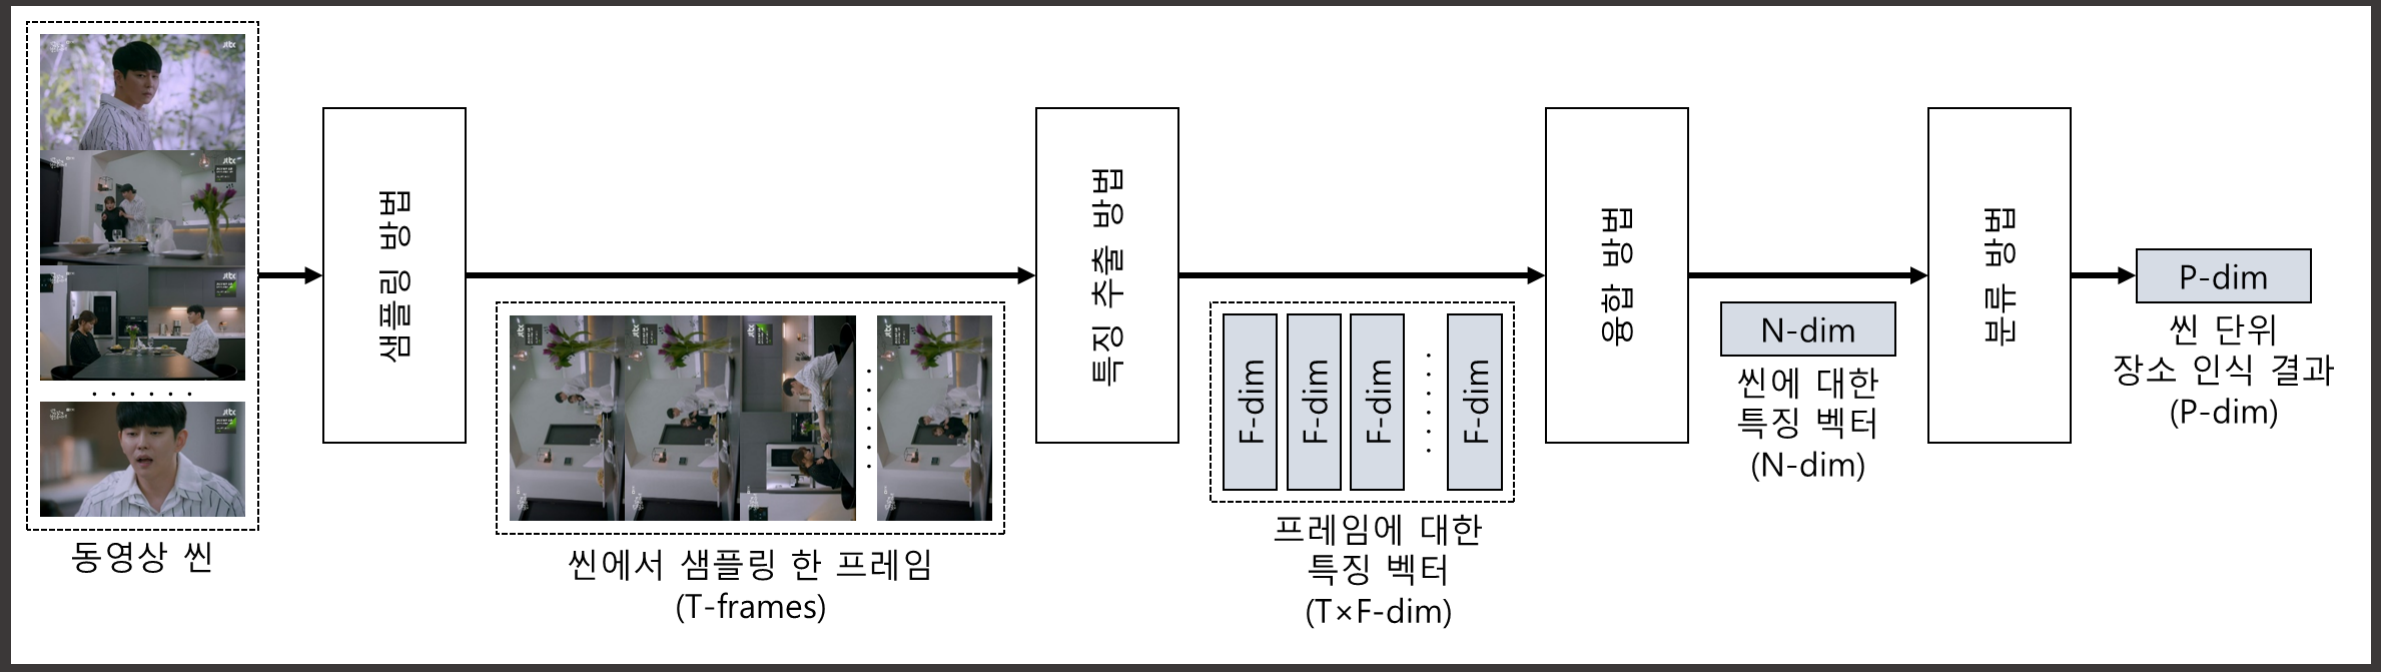


Thesis

A CNN-based Place Classifier with Attention Method for Scene-level Place Recognition in Broadcasting Video

Methods

- First, sample frames which helped or easy to recognize the place
- Second, Extracts the feature vectors for the selected frame and fuses them to make scene-level feature
- Finally, For scene recognition use classifier the fused features

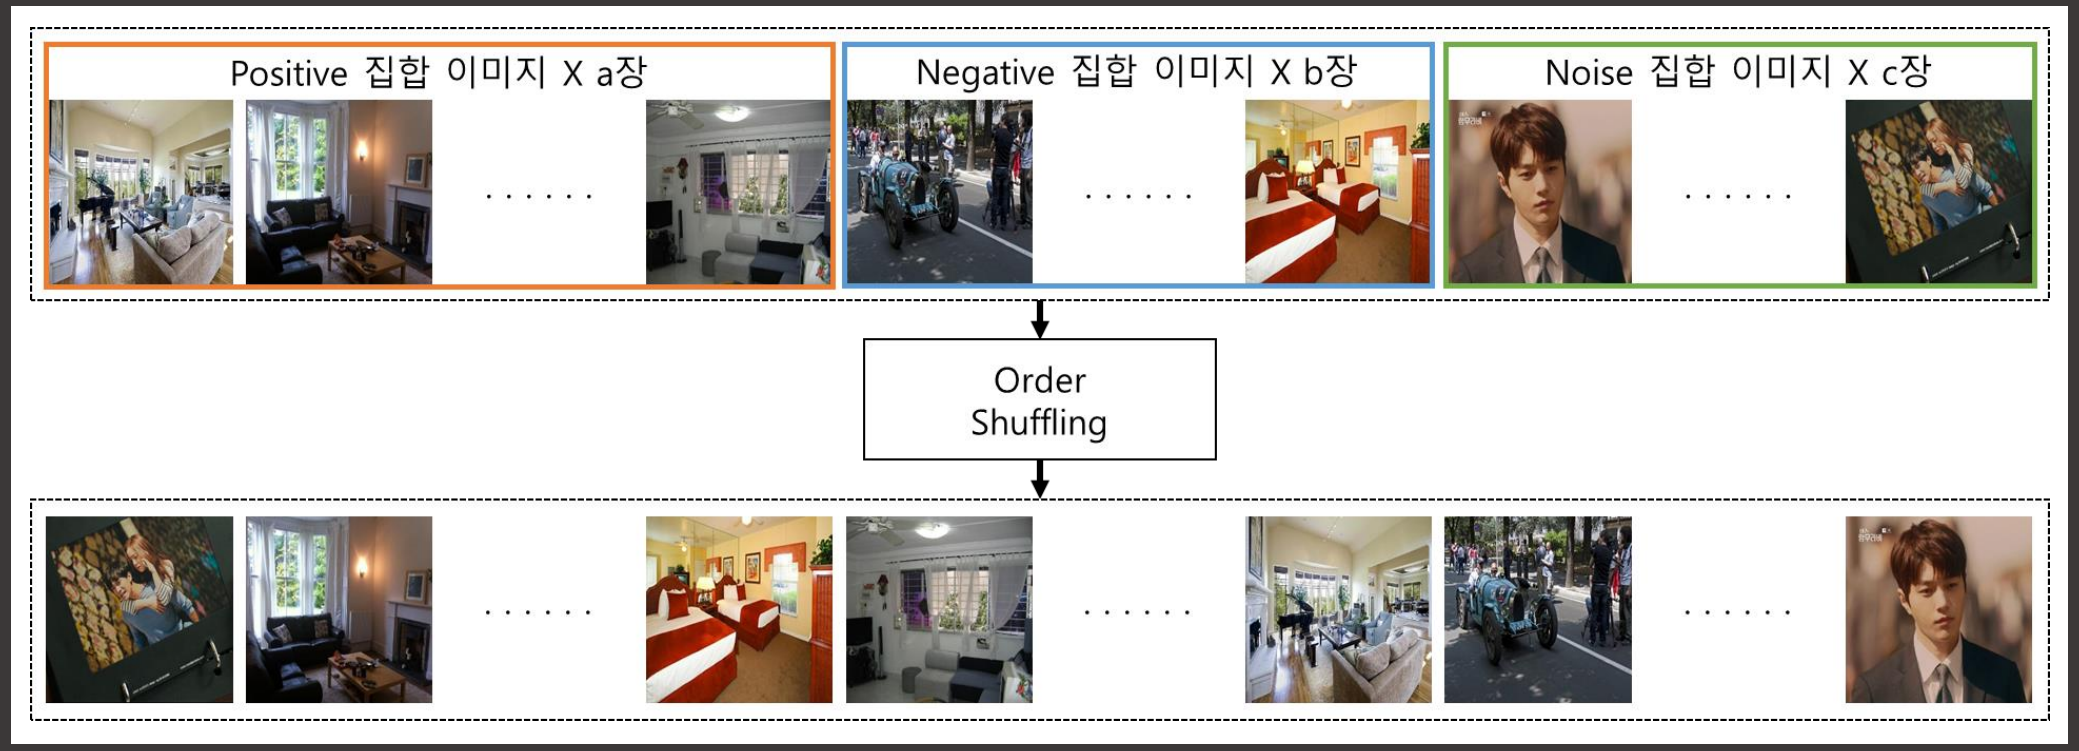


Thesis

A CNN-based Place Classifier with Attention Method for Scene-level Place Recognition in Broadcasting Video

Methods

- There were not enough dataset for scene-level place recognition in video.
- To solve this problem, Use image-based dataset for training and validation the proposed methods.



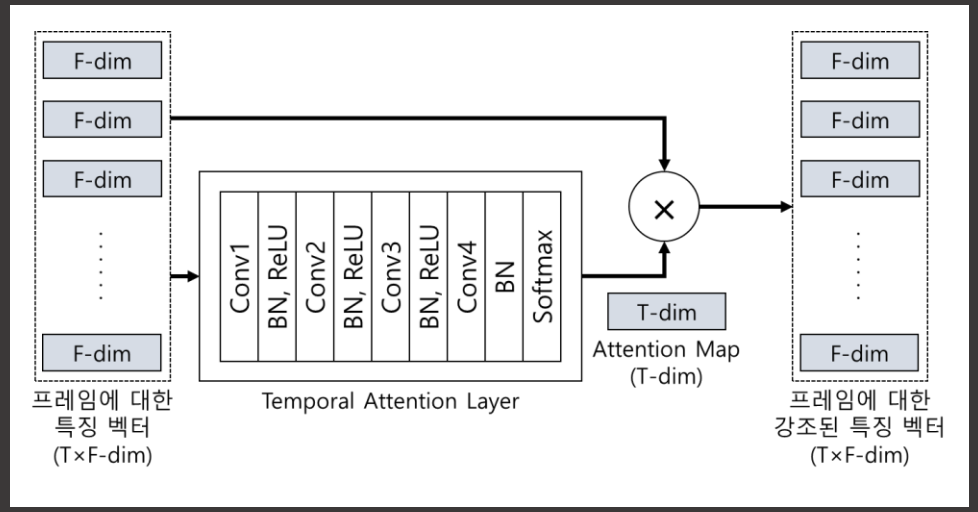
Thesis

A CNN-based Place Classifier with Attention Method for Scene-level Place Recognition in Broadcasting Video

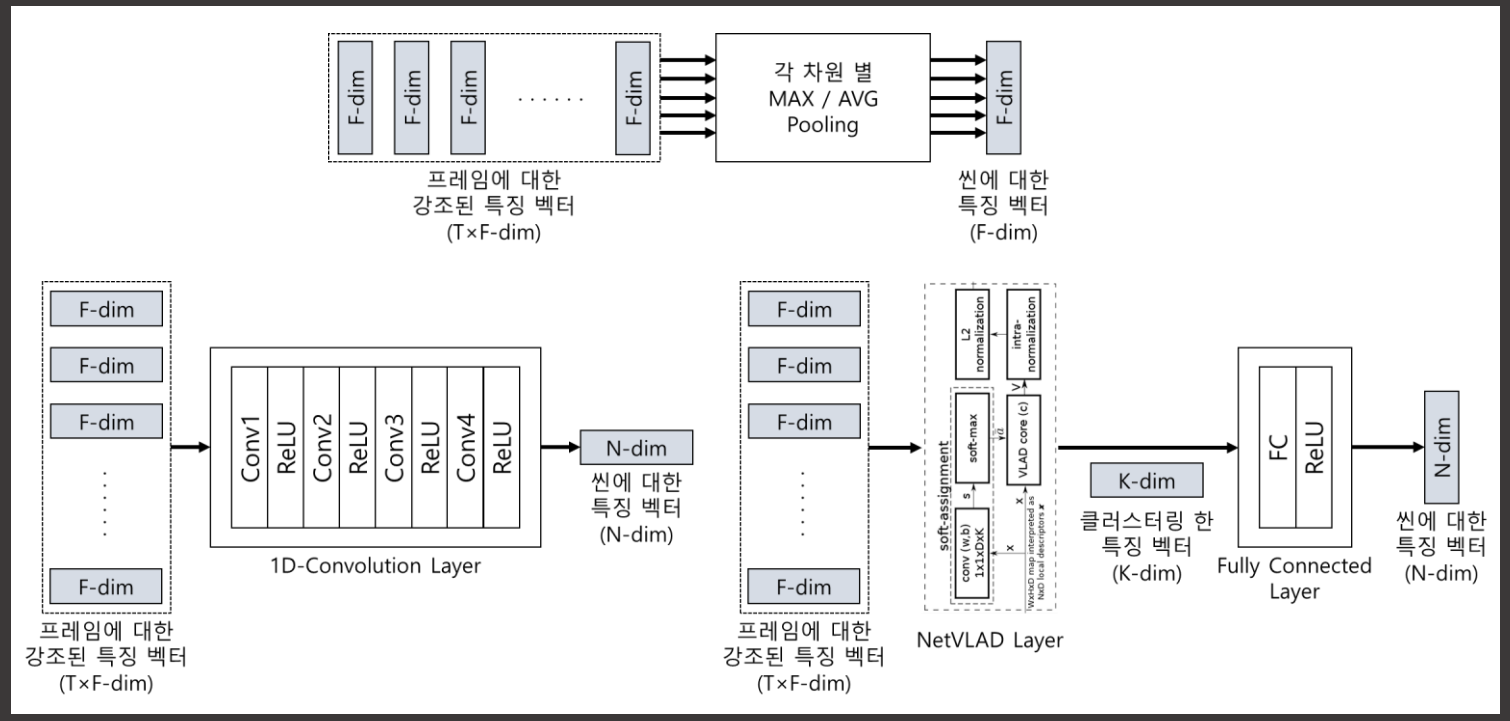
Methods

- The strength of each frame features are adjusted through attention method to improve performance
- And three methods are used to fuse feature: pooling, convolution, clustering

Attention Method



Method for feature fusion



Projects

Large Scale Video Classification Challenge

Research Assistant, Aug. 2017 - Oct. 2017

- Rank 8th from Large Scale Video Classification Challenge 2017, Workshop on ACM Multimedia 2017
- Designed deep learning models, which consists of the frame segment encoder, the feature extractor and the feature fusion layer

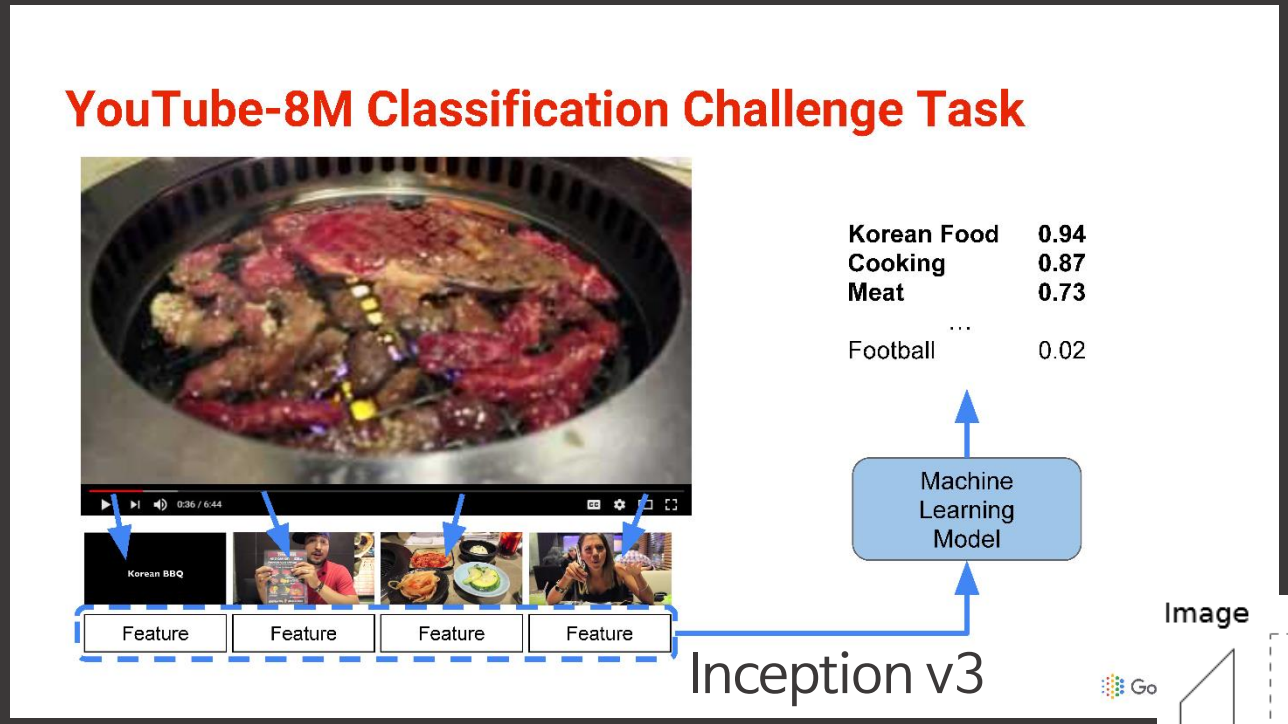
The 2nd YouTube-8M Video Understanding Challenge

Leader & Software Engineer, Jul. 2018 - Aug. 2018

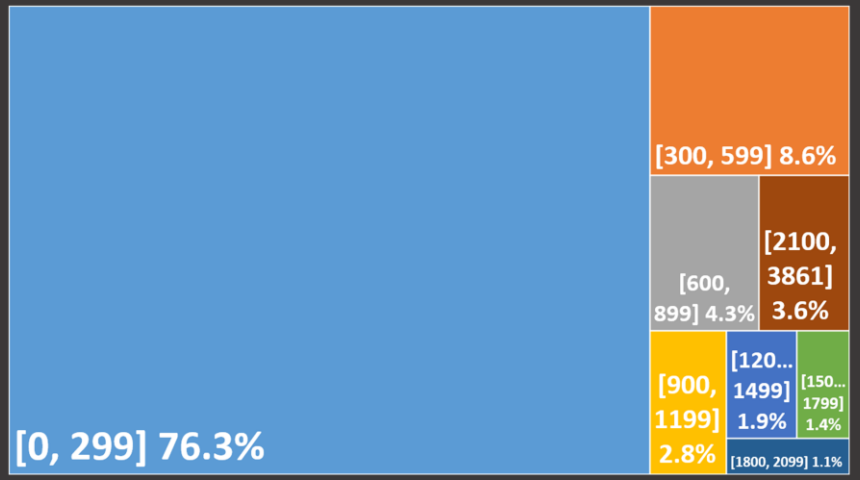
- Rank 44th from The 2nd YouTube-8M Video Understanding Challenge, Workshop on ECCV 2018 (Team name: sogang-mm)
- Approached video classification using various deep representations
- Trying to various tasks to keep the challenge competition rules

Projects

Video Classification & Video Understanding

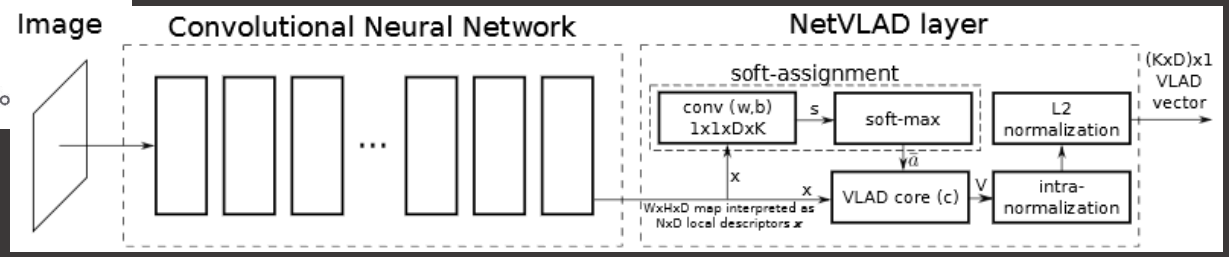


Summary of Challenge



Imbalance of training dataset

NetVLAD Architecture



Projects

Video Classification & Video Understanding

- **Approach for Video Classification with Multi-label on YouTube-8M Dataset** [pdf]
  Kwangsoo Shin, Junhyeong Jeon, Seungbin Lee (Team sogang-mm, disqualified from rank 44)

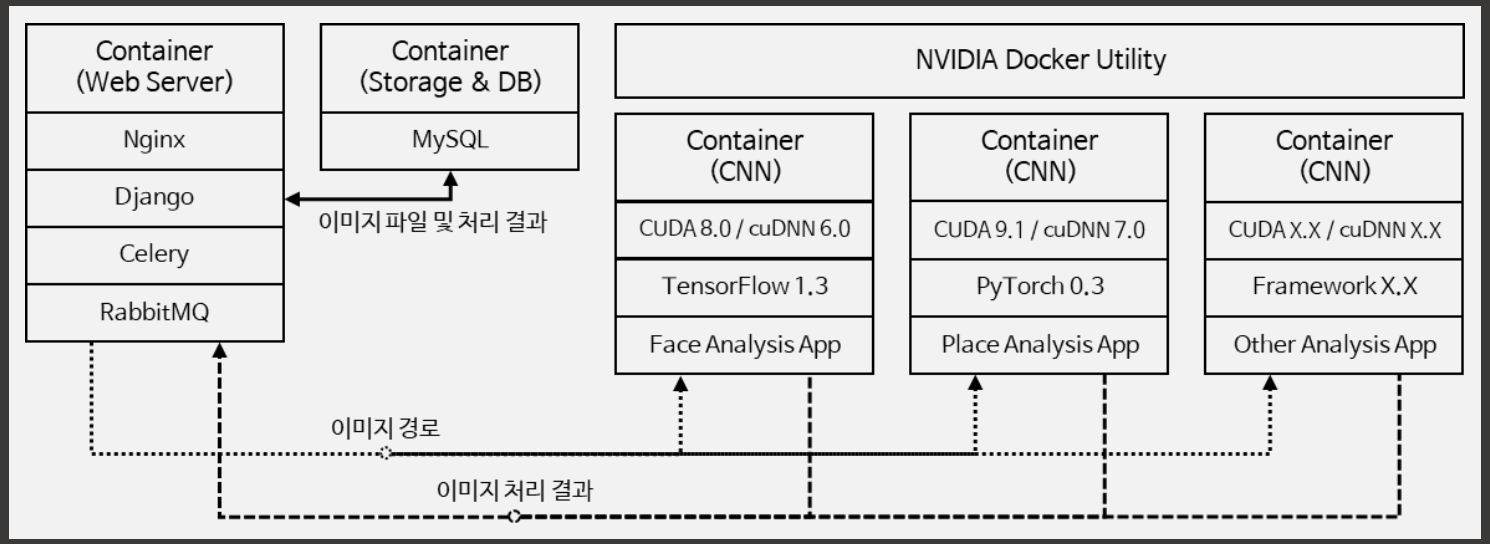
44	sogang-mm	0.86668

Projects

Semi-automatic Video Tagging Tool for Video Turing Test

Leader & Software Engineer, Jan. 2018 - Aug. 2019

- Participated researcher of Division 3 for Video Turing Test grant funded by Korea Government(MSIT)
  - Development of QA system for video story understanding to pass Video Turing Test &
    Data Collection and Automatic Tuning System Development for the Video Understanding
- Developed detection and recognition for semi-tagging
- Implemented RESTful API server to serving results which are consist of 3-DNN models
  for classifying actors, places and objects in video



Projects

Semi-automatic Video Tagging Tool for Video Turing Test

Leader & Software Engineer, Jan. 2018 - Aug. 2019

modules: face, place

JSON Format

```
{ "module": "face"
  "position": { "y": 104.0, "h": 80.0,
                "w": 60.0, "x": 105.0},
  "label": { "description": "박보영",
             "score": 0.77}
}
{ "module": "place"
  "label": {"description": "restaurant_patio",
            "score": 0.52},
           {"description": "coffee_shop",
            "score": 0.19,}
}

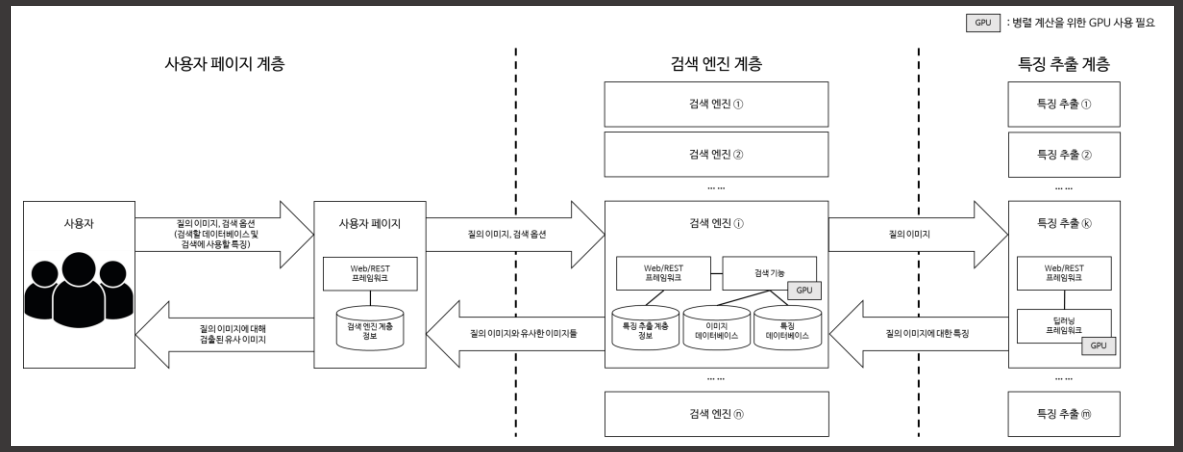
식당 외부: 52%, 커피숍 19%

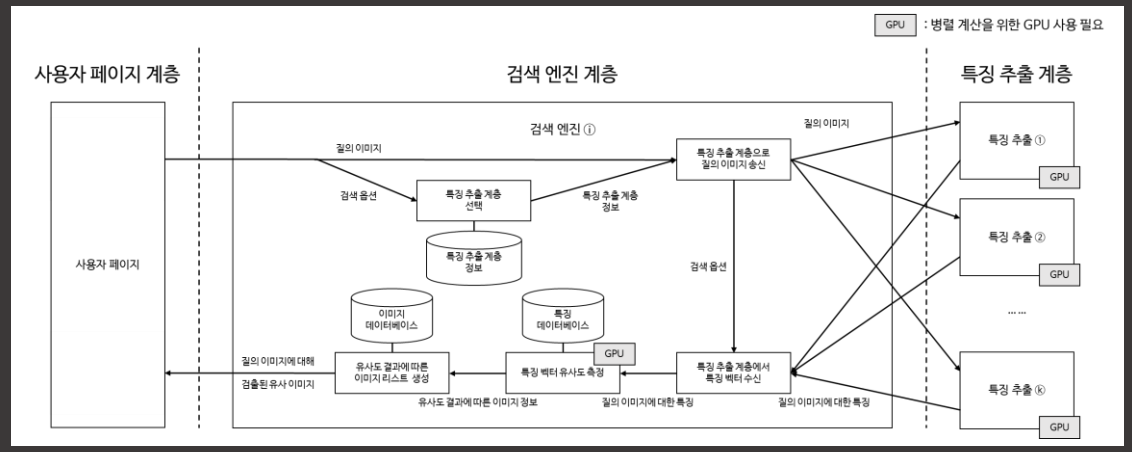
Projects

Online Image Retrieval using Deep Learning

Software Engineer, Sep. 2018 - Aug. 2019

- Developed Online contents based image retrieval system which is able to use in various domains such as fashion, clip-art and brand-logo
- Designed micro-service architecture for easily serving
- Implemented RESTful API server for application developers



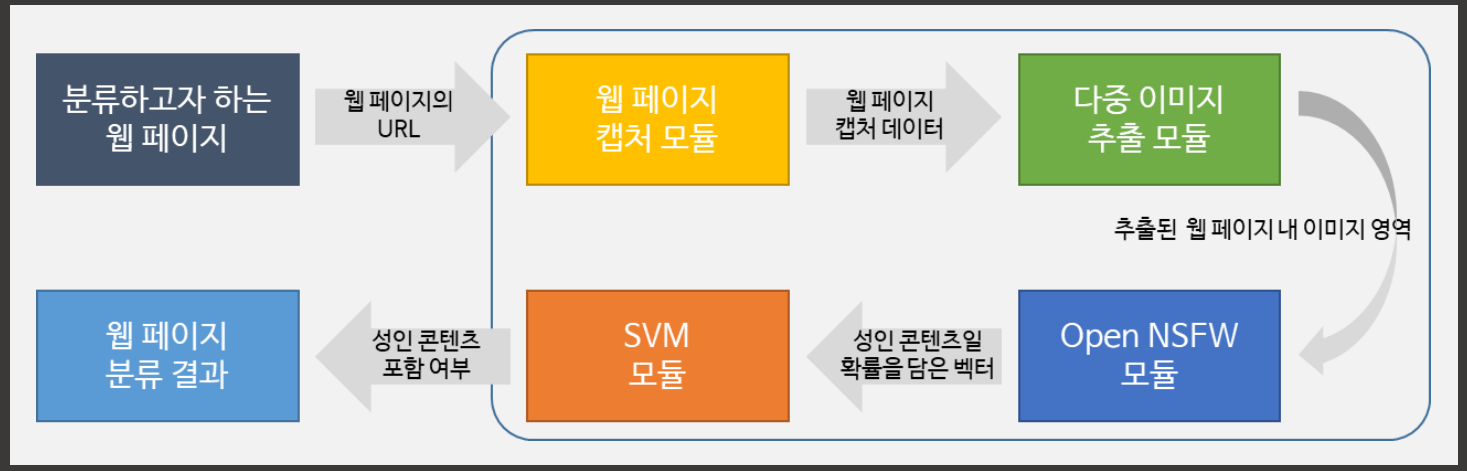


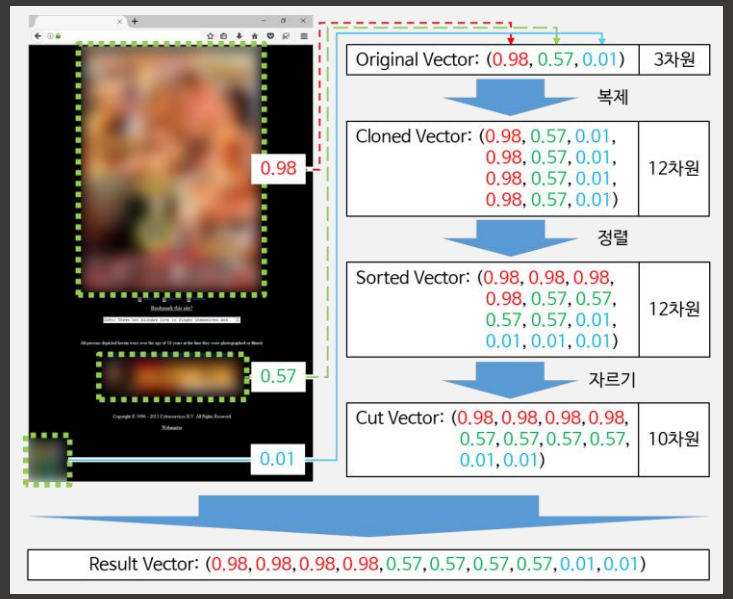
Projects

Adult Web Site Detection

Leader & Software Engineer, Aug. 2017 - Dec. 2017

- Developed system which detects whether the site includes adult content or not
- Detected region of interest on web site using computer vision techniques
- Binary classification to merge each probability of adult content result using SVM



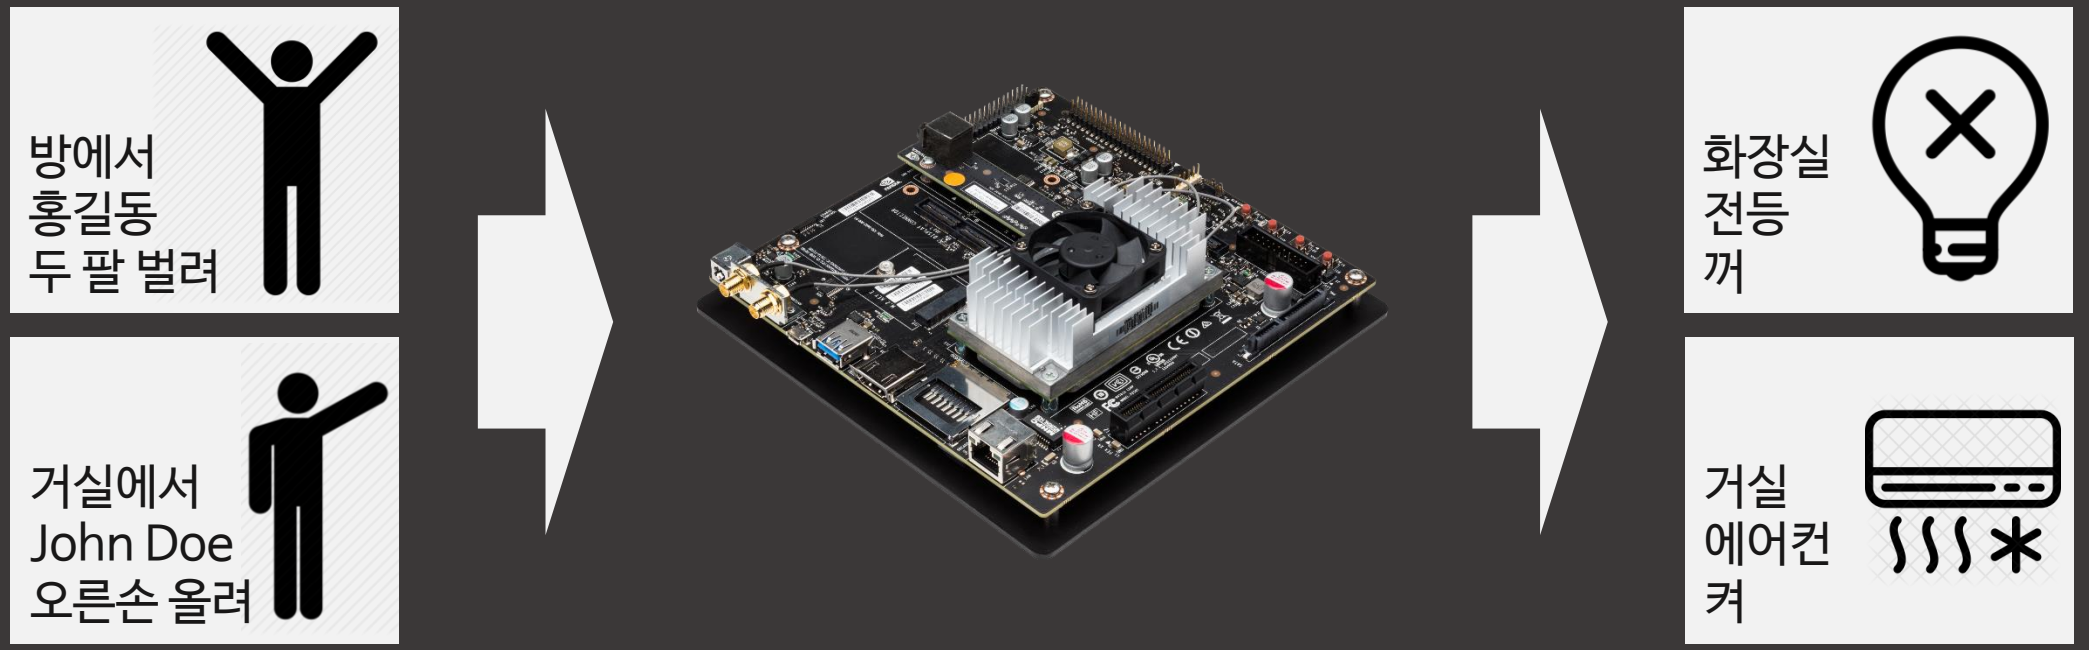


Projects

User-specific Home IoT Device Control through Face and Motion Recognition

Leader & Software Engineer, Jul. 2017 - Aug. 2017

- Participated the 3rd T-Hackathon held on SK Telecom with NVIDIA
- Developed deep learning models for recognizing face and motion using NVIDIA Jetson TX2 board
- Designed to control home IoT device system

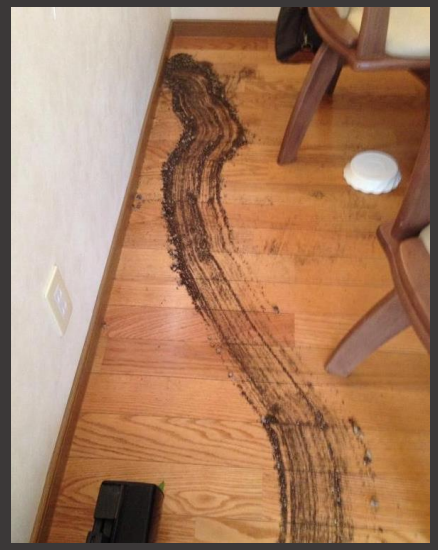


Projects

Detection and Avoidance of Pet Excrement in Robotic Vacuum Cleaner

Software Engineer, Oct. 2016 - Nov. 2016

- Won 2nd prize from Consumer Electronics Hackathon held on Samsung Electronics SOSCON2016
- Developed object detection and avoidance algorithm in real time on Robot vacuum cleaner

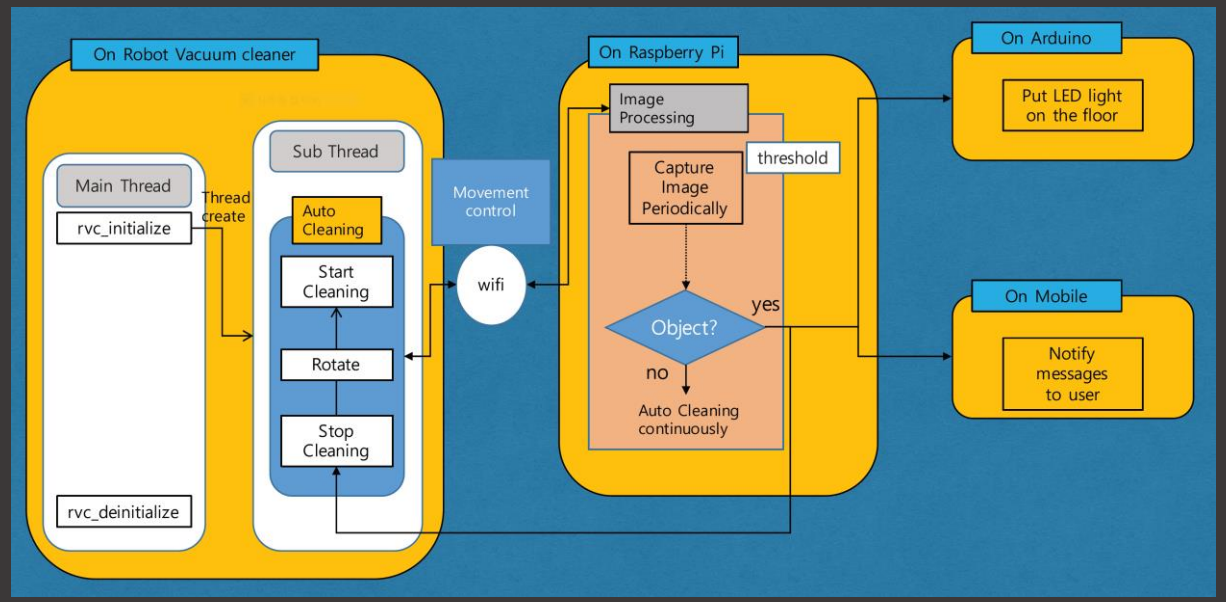


Projects

Detection and Avoidance of Pet Excrement in Robotic Vacuum Cleaner

Software Engineer, Oct. 2016 - Nov. 2016

- Limitations and Considerations
  - Embedded system with Tizen OS
  - Environment with many changes such as lighting, floor material, obstacles
  - Speed: detection and avoidance within 1.2 seconds

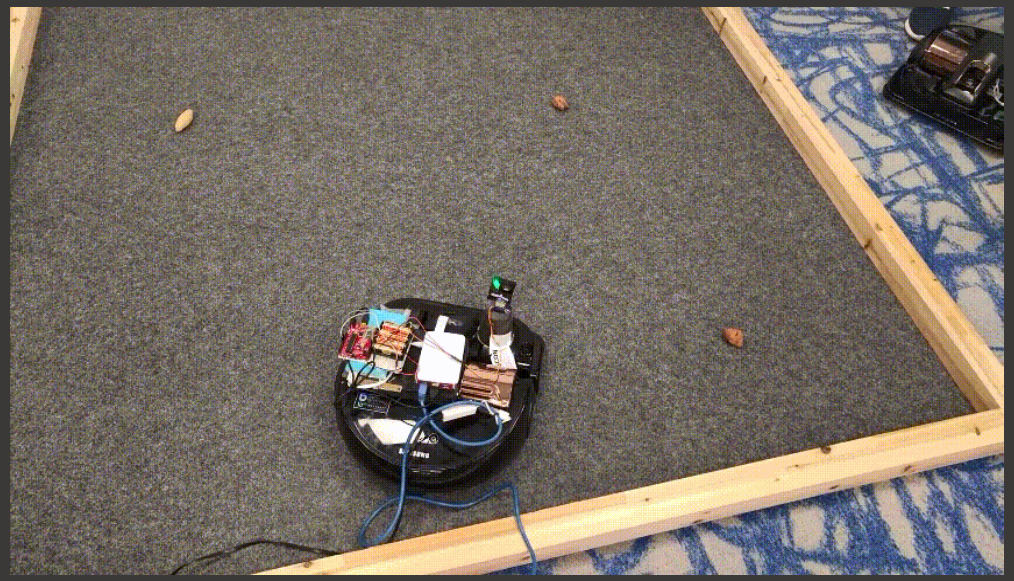


Projects

Detection and Avoidance of Pet Excrement in Robotic Vacuum Cleaner

Software Engineer, Oct. 2016 - Nov. 2016

- Results

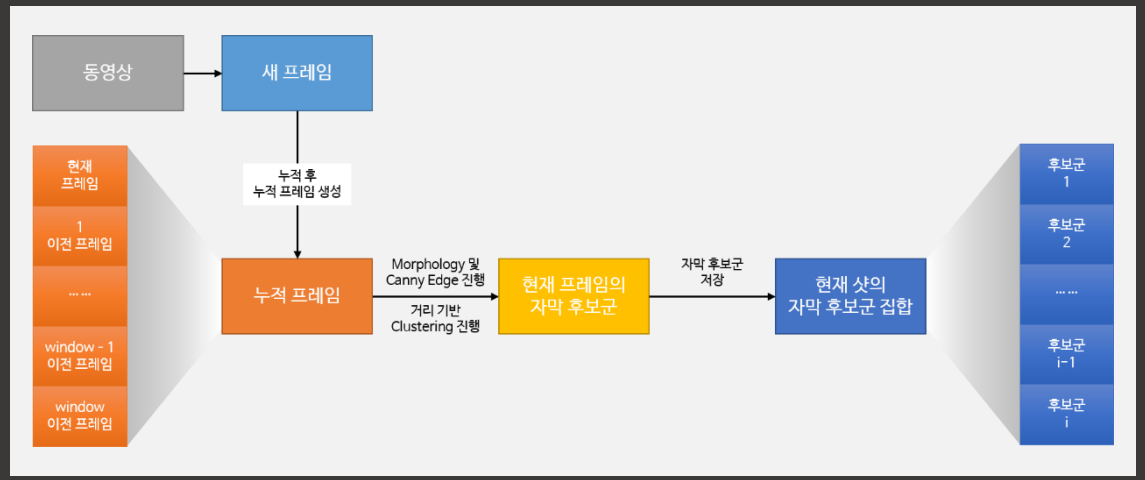


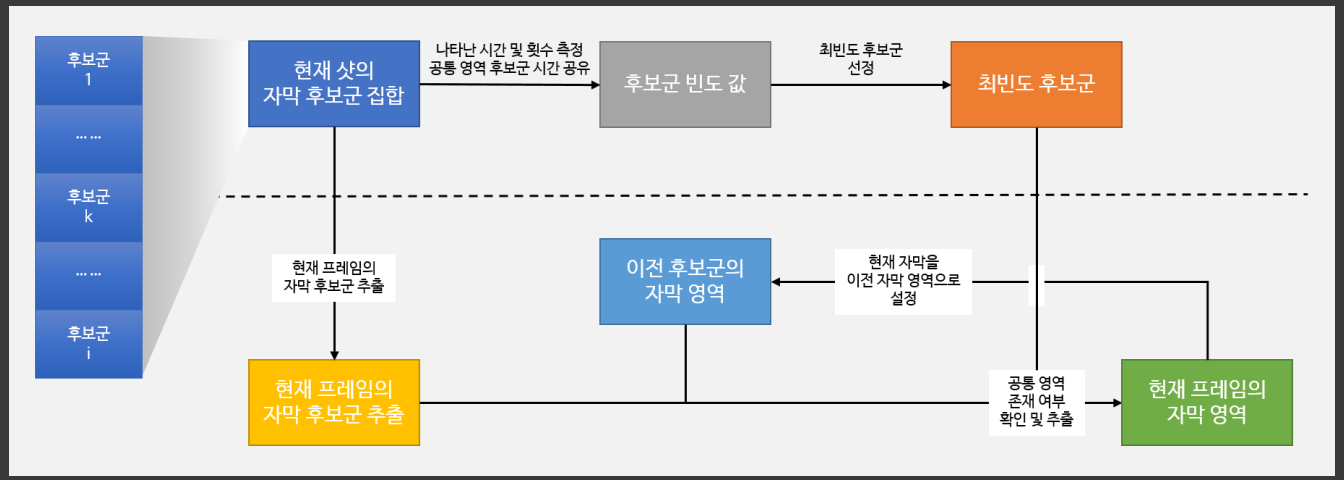
Projects

An Effective Subtitle Detection Method using Temporal Accumulation of Video Frames

Software Engineer, Oct. 2016 - Nov. 2016

- Developed subtitle detection method using frame superposition
- Sum the pixel values at the same weight for all frames in the windows for blurring the movement
- Extract subtitle candidate group from post-processing result
- Select the final subtitle position from candidate group by comparing previous positions





Projects

An Effective Subtitle Detection Method using Temporal Accumulation of Video Frames

Software Engineer, Oct. 2016 - Nov. 2016

Original video frames

Superposition frames in the windows

Projects

An Effective Subtitle Detection Method using Temporal Accumulation of Video Frames

Software Engineer, Oct. 2016 - Nov. 2016

- Results

Publications

International Conferences

A New Frame Rate Up Conversion Quality Enhancement Method Using Deep Convolutional Neural Network and Temporal Difference Map

Sangchul Kim, Seungbin Lee, Kwangsoo Shin, Jongho Nang
Proceeding of ICONI 2016

Approach for Video Classification with Multi-label on YouTube-8M Dataset

Kwangsoo Shin, Junhyeong Jeon, Seungbin Lee, Boyoung Lim, Minsoo Jeong, Jongho Nang
Proceeding of The 2nd Workshop on YouTube-8M Large-Scale Video Understanding, ECCV 2018

Awards

Excellence paper, Undergraduate Paper Competition in KIISE 42nd Winter Conference

2nd Prize, Consumer Electronics Hackathon Robotic Vacuum Cleaner Part in Samsung Electronics SOSCON2016

Best presentation paper, KIISE 43rd Winter Conference

Encouragement paper, Undergraduate Paper Competition in KCC 2017

Rank 8th, Large Scale Video Classification, Workshop on ACM Multimedia 2017

Best presentation paper, KCC 2018

Rank 44th, The 2nd YouTube-8M Video Understanding Challenge, Workshop on ECCV 2018

Thank You

kwangsoo Shin
